### **Reasons for Allowance**

The following is an examiner's statement of reasons for allowance:

The claimed invention is directed to a computer-implemented method for analyzing gene expression comprising compiling data of a plurality of measured gene expression signals into a form suitable for computer-based analyses and analyzing the compiled data using iterative independent component analysis (ICA), wherein the analyzing step comprises identifying an optimum number of independent clusters into which the data may be grouped.

Independent component analysis (ICA) is construed as a method defined in the specification on page 16, paragraph [0061]. Iterative ICA is construed as defined in the specification on page 16, paragraph [0062], which states that “iterative independent component analysis performs ICA in an iterative manner such that the analysis is performed for a successively increasing number of independent groups or clusters until the fit of the data starts to decrease.”

The closest prior art includes Martoglio et al. (Bioinformatics, Vol. 18, pages 1617-1624, 2002) and Lee et al. (Genome Biology, Vol. 4, pages R76.1-R76.21, 2003), both of which disclose a method for analyzing gene expression data with ICA. However, neither Martoglio et al. nor Lee et al. teach or suggest analyzing gene expression data with iterative ICA as defined in the instant specification, i.e. performing ICA in an iterative manner such that the analysis is performed for a successively increasing number of independent groups or clusters until the fit of the data starts to decrease.
